F FairOdds

The sportsbook that can't ban you.

Bet on real matches with your friends, straight from a link. Shared pools on Solana: no bookmaker on the other side.

Live on Solana devnet · fairodds1338.vercel.app

THE PROBLEM

The house wins.
Then it limits the winners.

- **Every bookmaker market carries a built-in margin.** The odds are priced so the house profits on average.
- **Players who win consistently get stake-limited or closed.** The bookmaker is the counterparty, so a winner is a cost.
- **Betting with friends runs on trust.** Group chats, screenshots and IOUs that someone forgets to pay.

THE INSIGHT

When fans bet against each other, there is no house to protect.

- In a **shared pool**, winners are paid by the other side of the pool. Nobody loses money because you are good.
- Sports betting is **already social**. The bet happens in the group chat; only the payment is missing.
- On Solana a $1 bet costs a fraction of a cent in fees, and **a link can carry a transaction**.

THE PRODUCT

Pick. Sign once. Challenge. Claim.

01 PICK

A real match

Fixtures from TheSportsDB. Live pools and honest odds; an empty side shows no fake odds.

02 SIGN ONCE

One wallet tap

A new wallet gets demo-USDC from the on-chain faucet in the same transaction as its first bet.

03 CHALLENGE

Send the link

X, Telegram or WhatsApp. The link opens the match with the other side already selected.

04 CLAIM

Paid by code

The oracle reports the final score. Winners claim from the program vault; draws refund everyone.

TRUST BY DESIGN

Nobody holds the money. Nobody picks the result.

- **Program-owned vaults.** Stakes sit in a PDA, not in our wallet. Payout = stake × pool ÷ winning side.
- **Pinned oracle.** A Switchboard feed reads the final score from TheSportsDB; its job hash is fixed when the market is created.
- **Permissionless settlement.** Anyone can lock, resolve or claim. No admin button decides the winner.
- **Automatic refunds.** Draw, one-sided pool at kickoff, or no result before the deadline: everyone gets their stake back.

WHAT IS LIVE TODAY

Working product on devnet, not a mockup.

MARKETS

20

real-fixture match markets, 3 already settled by the oracle

BETS

86

on-chain bets from 21 wallets, mostly our own test wallets so far

TESTS

20/20

integration tests on the compiled programs, plus API tests in CI

Two Anchor programs · season pools · public REST and agent API · Solana Actions · English / Polish mobile UI

WHY NOW, WHY SOLANA

Prediction markets went mainstream. The long tail of matches did not.

- Order books need market makers, so **lower leagues and friendly rivalries stay empty**. A pool works with two people.
- **Solana Actions** turn any URL into a bet slip, the natural format for group chats and social feeds.
- **Sub-cent fees and stablecoins** make small, frequent bets between friends viable.

MARKET

A market measured in tens of billions.

ONLINE SPORTS BETTING

$42–63B

operator revenue in 2025, growing about 8–13% a year (estimates vary by source)

OUR ENTRY POINT

Friend groups

European football fans and esports communities who already bet with each other in chats

Sources: Emergen Research, Market Research Future, Mordor Intelligence, Dataintelo (2025–2026 reports).

BUSINESS MODEL

Paid only when someone wins.

- **0.5% of the winners' profit** on match pools. Stakes and refunds are never charged. On a balanced pool that is about 0.25% of volume.
- Example: **$10M monthly volume ≈ $25k monthly revenue.** The fee can rise to 1–2% and stay far below a bookmaker margin.
- **Season pools:** 0% fee; revenue comes from yield on principal locked for months (demo reserve today, lending protocol later).
- **Next:** host fees for creator-run pools and a paid API for bots and media partners.

GO-TO-MARKET

Every bet needs an opponent. That is the growth loop.

- **Challenge links:** a pool is only fun with someone on the other side, so every bettor has a reason to invite one.
- **Creators and streamers** host pools for their audience on match day.
- **Start narrow:** Polish and European football fan groups, our hackathon communities, then esports (data adapter already built).

COMPETITION

Built for the bet between friends.

	BOOKMAKERS	ORDER-BOOK MARKETS	FAIRODDS
Who is on the other side	The house	A market maker	**Other fans**
Limits winning players	Yes	No	**No**
Works with two people	Yes	Rarely	**Yes**
Who controls the money	Operator	Operator or contract	**Program vault**
Share a bet as a link	No	Partly	**Yes**

RISKS WE PLAN FOR

We know where the hard part is.

- **Regulation.** Real-money pools only where licensed: geofencing and a licensed partner per market; a points-based free-to-play mode elsewhere.
- **Oracle failure.** Pinned feeds, two independent sources for seasons, and refunds by deadline instead of manual verdicts.
- **Empty pools.** One-sided pools cancel at kickoff; challenge links and the bot API bring the counterparty.
- **Today:** devnet only, demo tokens with no monetary value.

TEAM AND NEXT STEPS

From HackYeah runner-up to a product.
